### Any further comments or suggestions to improve the curriculum

- Little more stress free campus
- Improve clinical practice based studies. Discard outdated procedures and methods, promote and teach new advancements in dentistry
- Curriculum should include systematic approach to conduction of exams.
- More practical knowledge
- Please consider student's grievances too.
- Be more practical based
- Clinical based questions
- Theory as well as practical exams should be scheduled in such a manner that students should get adequate time to prepare . congestion between all the exams should be avoided
- Skill development
- Provision for Drinking water on the 7th floor(library)
- Continue Revision test concept

- More programs and measures are to be taken to improve the College life of students.
- Curriculum should include systematic approach to conduction of exam.
- Internal marks should not be a criteria to asses the eligibility of a student to appear for University Exam
- Please teach advanced techniques in dentistry more..in the bds curriculum eg:ultrasonic scaling needs to taught along with hand scaling...and composite restoration techniques needs to be given more weight tage..... 😊
- Improve the practical skill among students
- Completion of curriculum on time
- Make stessfree environment
- We are facing some issues with medical college classes. Only ppt notes are given for pathology classes and there's only online classes for microbiology. So it's hard for us to study these subjects. We would really appreciate direct offline classes as helps us to understand and study the topics better.
- More and more classes related to further studies and scopes in dentistry
- Regular evaluation whether students are studying or well knowledgeable on taught topic by regular testpaper or viva irrespective of the year of studying to make everyone confident before giving an exam that reliefs most of the stress during exam days 2. Rather than making students to byheart any theory topics before exam , make them to develop and understand concepts on related topics so that it will make us to thorough the topics and such that we don't have to rush upon books to look upon the topics learnt earlier that makes one potent into practical point of view aswell
- No further comments
- nil
- We are facing some issues with medical college classes. Only ppt/ pdf notes are given for pathology classes and there's only online classes for microbiology. So it's hard for us to study these subjects. We would really appreciate direct offline classes as it helps us to understand and study the topics better.
- To Try to provide more clinical help for students...
- Be more systematic from the start of academic year and please don't rush up and pressurize at the end
- Include more practical knowledge than theory class
- Rather than theory practical knowledge should be the main focus
- No further suggestions
- Reduce stress
- We are facing some issues with medical college classes. Only ppt /pdf notes are given for pathology classes and there's only online classes for microbiology.so it's hard for us to study these subjects.we would really appreciate direct offline classes as it helps us to understand and study the topics better.
- Need more interactive classes..

hard for us to study this subjects. We would really appreciate direct offline classes as it helps us to understand and study the topics better.

- Please allow zomato for students
- Should be more student friendly when setting exam schedule . Classes and pre clinicals in between exams is impractical. You can't expect students to gain good marks and juggle lab works at the same time.
- Nothing else
- Be more organised and effective in scheduling exams, completing theory and practicals
- Make classes more interactive
- Nothing
- Nil
- More clinical demonstrations, not direct approach to patients.
- Please consider the mental condition of students. We are also human beings. We need time to learn and study all these subjects. Back to back exams without any gap is too much to bear. Please do take into consideration students opinion. We are having university exams in the month of February and we have a lot of work to complete. This month alone our college is planning to complete all the theory and practical examinations. Either the college should inform the details of exam atleast one month before. But the sad condition is next week we are having practical exam and they are informing us 4 days prior. And lot of work to be completed within this short period of time. And on top of that we have our third internals in two weeks time. I humbly request the college authorities to take this matter into consideration
- Curriculum should include systematic approach to conduction of exams.
- Avoid back year
- .
- 1.Theory exams should be planned before hand and discussed with students for their convenience. 2. Proper time should be given for work submission and study holidays should be planned accordingly 3.classes should be planned before hand and informed earlier for preparation 4.permission to use digital means for class taking
  - The answers given above will vary for each department. Even for those where I've given an average , there are departments who I would grade as good. 'Average' refers to the overall grade. 2) As of now, our portions have not been covered unlike our peers. Additionally, exams and preclinical practicals together make a hectic schedule. Regardless I do believe that my batch can pull this off, even with thie limited time. 3) If , the coming batches face the same misfortune of missing classes and being confined to their homes , kindly take the theory classes as much as possible at the time to free their schedules once they reach the college for concentrating on their practicals
- Can add extra activites for relief
- Yes
- please dont be judgemental
- Teachers should pay more attention to students and help them in their studies

- Make classes offline including those for medical subjects.
- Please reduce the exam pressure
- Need to do dental practical classes more seriously for weak students
- I experience a lot of stress due to the tight schedule
- Positive atmosphere. Staff Punctuality. Effective teaching. Better communication. Less stress.
- I'm very lucky to be in the part of this prestigious institution who takes up the suggestions in a diligent manner.
- Incorporating a more practical approach to lectures
- No suggestions
